II. Exécution CI/CD service-configuration

```
pipeline{
   agent any
   triggers{
              pol1SCM('* * * * *')
       }
   stages{
       stage("Compile the source code") {
           steps {
           bat "mvn compile"
           }
       }
       stage("Package the application") {
           steps {
           bat "mvn clean package -DskipTests"
           }
       }
       stage("Deploy to the staging") {
           steps
           bat "mvn spring-boot:run"
       }
       }
   }
}
```

III. Exécution CI/CD service-register

```
pipeline{
   agent any
   triggers{
             pollSCM('* * * * *')
       }
   stages{
       stage("Compile the source code")
           steps
           bat "mvn compile"
       }
       stage("Package the application") {
           steps {
           bat "mvn clean package -DskipTests"
       }
       stage("Deploy to the staging") {
           steps
           bat "mvn spring-boot:run"
       }
       }
   }
}
```

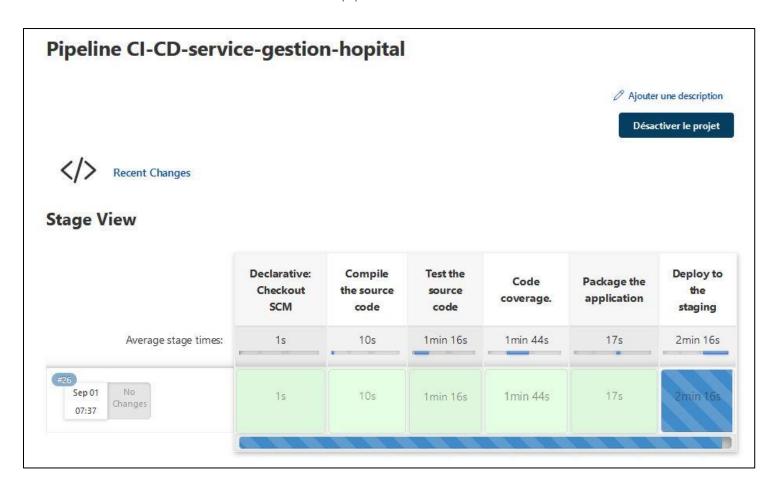

IV. Exécution CI/CD service-proxy

```
pipeline{
   agent any
   triggers{
               pollSCM('* * * * *')
        }
    stages{
       stage("Compile the source code")
                                           {
           steps
           bat "mvn compile"
           }
       }
       stage("Package the application") {
           steps
                      - {
           bat "mvn clean package -DskipTests"
           }
        }
       stage("Deploy to the staging") {
           steps
           bat "mvn spring-boot:run"
       }
    }
}
```

V. Exécution CI/CD service-hôpital

```
pipeline{
  agent any
  triggers{
     pol1SCM('* * * * *')
  }
  stages{
     stage("Compile the source code") {
        steps {
           bat "mvn compile"
     stage("Test the source code") {
        steps {
           bat "mvn test"
     stage("Code coverage.") {
        steps {
           bat "mvn jacoco:report"
           publishHTML (target: [
              reportDir: 'target/site/jacoco',
              reportFiles: 'index.html',
              reportName: "CodeCoverageReport"
           bat "mvn clean verify"
     stage("Package the application") {
        steps {
           bat "mvn clean package -DskipTests"
        }
     stage("Deploy to the staging") {
        steps
        bat "mvn spring-boot:run"
      }
   }
}
```

VI. Exécution CI/CD service réservation-lit

```
pipeline{
  agent any
  triggers{
     pol1SCM('* * * * *')
  stages{
     stage("Compile the source code") {
        steps {
           bat "mvn compile"
     stage("Test the source code") {
        steps {
           bat "mvn test"
     stage("Code coverage.") {
        steps {
           bat "mvn jacoco:report"
           publishHTML (target: [
              reportDir: 'target/site/jacoco',
              reportFiles: 'index.html',
              reportName: "CodeCoverageReport"
           bat "mvn clean verify"
     stage("Package the application") {
        steps {
           bat "mvn clean package -DskipTests"
        }
     stage("Deploy to the staging") {
        steps
        bat "mvn spring-boot:run"
      }
   }
}
```

VII. Exécution CI/CD frontend

A. Pipeline du frontend

```
pipeline{
   agent any
   triggers{
              pol1SCM('* * * * *')
       }
   stages{
       stage("Compile the source code")
           steps
           bat "mvn compile"
       }
       stage("Package the application") {
           steps
           bat "mvn clean package -DskipTests"
       }
       stage("Deploy to the staging") {
           steps
           bat "mvn spring-boot:run"
       }
       }
   }
}
```
